

GREEN POINT
RESEARCH

Environmental Policy

Environmental compliance is a cornerstone to being a responsible corporate citizen. Numerous environmental laws and regulations have been enacted to protect the environment by reducing the discharge of contaminants and pollutants into the air, water, and soil. These laws and regulations are complex and involve licensing, permitting, reporting, and record-keeping requirements. Green Point Research shall adhere to all applicable environmental laws and regulations.

Green Point Research considers ways in which we can reduce the environmental impact of the hemp supply chain, promote energy efficiency, support biodiversity, and conserve forestry and other natural resources. Each employee, officer, and director is charged with ensuring that his or her activities and those of their fellow workers are environmentally sound. In addition, we encourage our farmers and other supply chain partners to join us in adhering to applicable environmental laws and regulations, reducing supply chain impact on the environment, promoting energy efficiency and biodiversity, and conserving forestry and other natural resources.

Our team of hemp industry professionals shall develop policies and programs, commit organizational resources and educate our workforce to adhere to applicable laws, Green Point Research's Code of Conduct and other compliance policies, and this Environmental Policy. This policy will be regularly reviewed by the Green Point Research's Board and amended as needed.
